Experience

Google

Apr 2025 – Present

Software Engineer II

Taipei, Taiwan

- Worked on bring-up and stability validation of diagnostic tools for new GPU server platforms, ensuring reliability across evolving hardware/software environments.
- Debugged cross-layer issues across diagnostic tools, system software, and hardware; collaborated with vendors (e.g., NVIDIA) and manufacturers to resolve platform issues.
- Identified and resolved a production blocker caused by diagnostic log size limits, reducing log size by **3×** within one day and unblocking large-scale GPU platform deployment.
- Optimized GPU thermal diagnostic tool performance by identifying execution bottlenecks, reducing runtime by **50%** (about **30 minutes** per run) while maintaining full test coverage across thousands of servers.

Mediatek

Sep 2022 – Mar 2025

Engineer

Taipei, Taiwan

- Identified NPU multicore scalability issues, achieving **30–50%** performance improvement.
- Designed NPU performance breakdown algorithms and KPIs, enabling architecture analysis and benchmarking against competitors.
- Built a full-stack dashboard platform used by **100+** engineers for performance monitoring and competitive analysis.
- Automated C model report generation pipeline, reducing manual effort by over **10×**.
- Analyzed performance of large models (LLM, MLPerf, ETHZ) on NPU.

Institute for Information Industry

Aug 2020 – Jan 2021

Research Project Assistant

Taipei, Taiwan

- Built MLaaS web system supporting data upload and real-time prediction with incremental model updates.

Technical Skills

Languages: C++, C, Python, Javascript, HTML, CSS, MATLAB

Web Development: Flask, Dash, React.js, Selenium, Bootstrap, Docker, MongoDB, Apache, Unicorn, JWT, SSL

Others: Deep Learning, DARTS, Incremental Machine Learning, MLaaS, scikit-learn, PyTorch, pandas, Linux, Git, Latex

Education

National Taiwan University

Aug 2020 - Aug 2022

Master of Electrical Engineering (GPA: 4.20/4.30, Rank: 8/90)

Taipei, Taiwan

- **Relevant Coursework:** Operating System, Web Programming, Computer Communication Networks, Machine Learning Foundations and Techniques, Cloud Computing and Cyber Security, Advanced Digital Signal Processing

National Tsing Hua University

Aug 2016 - Jul 2020

Bachelor of Electrical Engineering (GPA: 4.11/4.30, Rank: 8/112)

Hsinchu, Taiwan

- **Relevant Coursework:** Data Structures, Algorithms, Computer Architecture, Introduction to Programming (II) (C++), Introduction to Programming (C), Introduction to Machine Learning, Digital Signal Processing, Signals and Systems

Selected Projects

Greater Taipei Find YouBike [\[link\]](#) | React, Google Map Api, MongoDB, Express, Bootstrap, axios, HTML, CSS

- Developed an online service that allows users to easily query info about YouBike stations in the Greater Taipei area.
- Integrated Google Maps, Taipei YouBike 1.0, 2.0, and New Taipei YouBike 1.0 APIs, with consideration for RWD.

Publication

SGAS-es: Avoiding Performance Collapse by Sequential Greedy Architecture Search with the Early Stopping Indicator

- Authors: Shih-Ping Lin, Sheng-De Wang
- Published at Advances in Information and Communication: Proceedings of the 2023 Future of Information and Communication Conference (FICC), Volume 2. Cham: Springer Nature Switzerland · Mar 2, 2023.
